Sensational Science Week at PS 3

In the collaborative tradition that thrives at PS3, parents and staff together brought the magic of scientific discovery to PS3 for one special week. During two school days, all students visited an inflatable Sky Dome planetarium in the Auditorium, where they learned about the night sky and about the Greek myths behind the constellations. Then, that Saturday, students spent an afternoon exploring and explaining at our annual hands-on, parent-run Science Fair. Students displayed more than 45 projects (some of which were crafted at a Maker's Faire earlier in the week), expert scientists from NYU shared special demos, and classes did group presentations. All our young scientists enjoyed this inspiring day of creativity and learning!
